EDUCATION

Athens University of Economics and Business

BSc Computer Science, GPA: 9.4/10

Athens, Greece

Oct. 2022 – Feb. 2027

- Selected for Erasmus+ semester at TUM Informatics (Technical University of Munich).

EXPERIENCE

AI & Process Automation Specialist · Viva.com

Microsoft Power Platform, Camunda, OpenAI Codex, Anthropic Claude

Jul. 2026 – Present

Athens, Greece

- At Viva.com, I was hired by and work under the COO. My mission is to design and implement AI-driven solutions to automate manual processes and improve operational efficiency within the Organizational Effectiveness team.

Software Engineer Intern · Cloudflare

TypeScript, Cloudflare Workers, Clickhouse, Kubernetes, GraphQL

Apr. 2026 – Jul. 2026

Lisbon, Portugal

- Improved the backend of Cloudflare Radar. Optimized the execution of massive queries, ensuring that even the most demanding historical queries, which routed to tens of billions of rows, load reliably and accurately.
- Increased the cacheability of queries that depend on the massive Clickhouse Data Lake. Divided API queries into groups of cached canonically-aligned chunks, so that overlapping queries reuse previous results.
- Created a cache invalidation system to allow editors to refresh cached public pages when changing annotations affixed to charts, to prevent stale data from being visible.

Software Engineer Intern · NOKIA

Python, Flask, Vue.js, Bootstrap, Docker, MariaDB, InfluxDB, SNMP, REST

Apr. 2025 – Mar. 2026

Athens, Greece

- Developed a web application for monitoring and management of lab infrastructure (Linux/Windows servers, network switches, and electrical equipment). Interfaced with Zabbix and phpIPAM.
- Built Jenkins pipelines and Ansible playbooks to automate metrics collection, speeding it up 10-100x with asynchronous polling, request batching, and an optimized database schema and queries.
- Created Grafana and Metabase dashboards to identify trends, which drove executive decisions.

PROJECTS

for more projects: [GitHub](#)

SqueezeTrOCR | Python, PyTorch, Transformers, Modal, OpenCV, Hugging Face

- Developed an OCR pipeline for TROGS-26, the ICDAR 2026 Competition in Text Recognition on Greek Squeezes, fine-tuning a dual-light TrOCR model that packs raking-light relief scans into a single RGB tensor.
- Engineered a character-posterior lattice decoding layer using an adaptive-order Prediction by Partial Matching character language model, reaching a 7.9% Character Error Rate (CER) under the official contest scorer.
- Achieved the best results among 150 students in my university Data Science class with this task assignment.

tree-eclass | Python, FastAPI, SQLite, Docker, BeautifulSoup, WebDAV, Jinja2, JavaScript

- Built a web service to monitor the webpages of my university courses, automatically authenticating to sync lecture files, announcements, and exercises. Engineered a recursive change-detection pipeline, version archiving, notifications, and visual PDF diffs.

ESP32 RS-232 Virtual Printer | C++, ESP32, FreeRTOS, PlatformIO, SMTP

- Engineered firmware to bridge legacy RS-232 print streams to email over WiFi, using a dual-core task model, PSRAM-backed buffering, automatic WiFi/NTP recovery, and retry-safe queue handling to minimize data loss.

ACCOMPLISHMENTS

- One of three Greek students selected to compete at the European Huawei Seeds for the Future startup competition in Rome, Italy (2024). Learned about technology and entrepreneurship from industry leaders.
- Selected for [CTY Greece](#), affiliated with the Johns Hopkins Center for Talented Youth (CTY).
- Received a scholarship to spend a year as a HS exchange student in Italy from [AFS Greece](#).
- Cambridge Certificate of Proficiency in English – C2 – Grade A (222/230, 2019).
